

Standard Analytic Reports

As a member of the NHQCC, you will receive quarterly Standard Analytic Reports (SAR) which provide quality measures data about your nursing home. The IPRO QIN-QIO nursing home team shares this report after Nursing Home Compare is updated.

The report includes graphs and statistics about the quality measures in the Five-Star Quality Measure (QM) rating (nine long-stay measures and six short-stay measures) as well as nine additional Medication Data Set (MDS)-based quality measures that are shared on Nursing Home Compare.

To calculate the QM Rating, CMS assigns points to each measure, with the highest number of points for the best performance. The report graphically summarizes your nursing home's current QM scores and how your performance compares to the national distribution for each quality measure.
