

# Exploring Sepsis Strategies – Part 1: Early Identification, Patient and Family Engagement, and Disparities in Care

IPRO, Alliant, Telligen, and Compass Joint HQIC LAN Event

August 24, 2021

*Please note, this event is being recorded.*

# How To Use Chat Feature

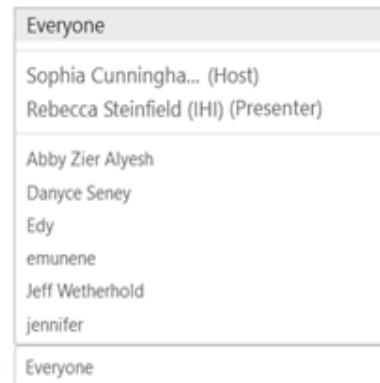

## Chat Feature Highly Encouraged

### To send a Chat Message:

- Open the Chat Panel

- In the Send To or To **drop-down list**, select the recipient of the message
  - **Scroll All the Way Down**
  - **Select “Everyone”**
  - **Do not select “All Attendees”**
- Enter your **message** in the Chat Text Box, then **press Enter** on your keyboard

### Enter in Chat:

- Your Name
- Your Role
- Your Hospital
- Your State

# Collaborating to Support Your Quality Improvement Efforts

- Healthcentric Advisors ■ Qlarant

Hospital Quality Improvement Contractors  
CENTERS FOR MEDICARE & MEDICAID SERVICES  
IQUALITY IMPROVEMENT & INNOVATION GROUP

# Exploring Sepsis Strategies: Part 1

---

## Focus

- Importance and impact of early, equitable sepsis recognition from patient/family and healthcare provider perspectives

## Learning Objectives

- Understand the interconnectedness of early identification, patient/ family engagement and disparities in care to enhance patient safety
- Learn how a sepsis screening tool was successfully implemented and achieved results in a 100-bed rural hospital using a multidisciplinary approach
- Listen to a sepsis survivor experience and how early identification may have assisted with improving care delivery and patient outcome

■ Healthcentric Advisors ■ Qlarant  
■ Kentucky Hospital Association

IQUALITY IMPROVEMENT & INNOVATION GROUP

# What is Sepsis and Why Focus On It Now?

- Sepsis is the body's extreme response to an infection, including COVID-19, and is a life-threatening medical emergency
- Early detection and timely treatment are critical to prevent tissue damage, organ failure and death
- Anyone can get sepsis, know the early warning signs and act fast to help save a life
- Sepsis is a leading cause of death among critically ill people and a top reason for readmissions
- Sepsis can worsen pre-existing conditions
- Sepsis is costly to treat, fraught with human and economic costs and annual costs to hospitals to treat is estimated to be \$24 billion
- September is Sepsis Awareness Month

## Enter Thoughts in Chat

Does this resonate with you?

Have you, or someone close to you, had sepsis?

# Telligen HQIC: Hospital Baseline Assessment

Indicate how engaged your hospital's front-line staff are with the organization's improvement efforts in this area (0=not engaged; 10=completely engaged)

**Enter your thoughts in Chat!**

What are strategies you could attempt to gain staff buy-in related to sepsis quality improvement activities?

# Compass HQIC: Hospital Readiness Assessment

## Best Practice Interventions Not Started or Needing More Information

- Establish a multidisciplinary team
- Identification of strategies aimed at disparities
- Integration of patient/family engagement
- Modified Early Warning System (MEWS) early detection system
- Sepsis education on recognition, treatment, post-sepsis symptoms
- Use of 1-hour sepsis bundle
- Hand off of care
- EHR integration-use of alerts
- Use of 6-hour sepsis bundle
- Use of early detection sepsis screening tool
- Use of 3-hour sepsis bundle
- Development of standardized order sets for care
- Broad spectrum antibiotics availability in ER

# IPRO HQIC: Hospital Baseline Assessment – Education

Does your facility use data or other means to identify gaps in care by REaL or SDOH?

Does your facility regularly establish goals to reduce health disparities in any quality measures?

Over 55% stated would like education and assistance with both

# **RACIAL DISPARITY:** **Sepsis in Vulnerable Populations**

**Sandy Cayo, DNP, FNP-BC**

Vice President Clinical Performance and Transformation

NJHA's Health Research and Educational Trust of NJ

Lead for IPRO HQIC in NJ

■ Healthcentric Advisors ■ Qlarant  
■ Kentucky Hospital Association  
■ Q3 Health Innovation Partners  
■ Superior Health Quality Alliance

HQIC  
Hospital Quality Improvement Contractors  
CENTERS FOR MEDICARE & MEDICAID SERVICES  
IQUALITY IMPROVEMENT & INNOVATION GROUP

# Objectives

---

- To discuss the disparity in sepsis treatment and management among vulnerable populations
- To understand underlying causes for disparity in racial and ethnic groups related to sepsis
- To identify sustainable and evidence-based approaches to managing disparity in sepsis care

■ Healthcentric Advisors ■ Qlarant  
■ Kentucky Hospital Association  
■ Q3 Health Innovation Partners  
■ Superior Health Quality Alliance

HQIC  
Hospital Quality Improvement Contractors  
CENTERS FOR MEDICARE & MEDICAID SERVICES  
IQUALITY IMPROVEMENT & INNOVATION GROUP

# Background

---

## Some of the most vulnerable populations at risk for developing sepsis include:

- Older adults
- Male gender
- Immunocompromised
- History of chronic conditions
- Black/African American race

# Background

---

- Typically older age presents as a risk factor, however, sepsis impacts all ages from newborn to elderly
- Studies show specifically in neonates, insurance payer status, income, race, and gender were strong indications for increased sepsis mortality
- Despite standardization of care through evidence-based practice bundles, wide disparity among races still exist

■ Healthcentric Advisors ■ Qlarant  
■ Kentucky Hospital Association  
■ Q3 Health Innovation Partners  
■ Superior Health Quality Alliance

HQIC  
Hospital Quality Improvement Contractors  
CENTERS FOR MEDICARE & MEDICAID SERVICES  
IQUALITY IMPROVEMENT & INNOVATION GROUP

# Facts and Stats!

---

- One of the main drivers to disproportionate outcomes in sepsis is access to high quality care
- Vulnerable minority patients may only have access to care in more urban, safety net hospitals which have a disproportionate impact on individual outcomes
- Literature suggest indications for approaching care from an organizational and systems-level have better outcomes than an individual focus
- Population focus help mitigate sepsis among vulnerable groups

■ Healthcentric Advisors ■ Qlarant  
■ Kentucky Hospital Association  
■ Q3 Health Innovation Partners  
■ Superior Health Quality Alliance

HQIC  
Hospital Quality Improvement Contractors  
CENTERS FOR MEDICARE & MEDICAID SERVICES  
IQUALITY IMPROVEMENT & INNOVATION GROUP

# Supporting Literature

---

- Significant racial differences have been observed in the emergency department (ED) as well as primary and specialty care settings. A 2018 study by DiMeglio et al., found that black patients presenting to the ED received lower acuity ratings and experienced significantly longer wait times following triage compared to white patients.
- A 2015 meta-analysis found that structural racism was associated with poorer mental health, including depression, anxiety, psychological stress and other outcomes including poorer general health (Paradies et al 2015).
- Perceived discrimination can have an impact in physiological and psychological outcomes (Carlisle 2015; Sims et al 2015).

# Facts and Stats: Implicit Bias

---

- Implicit or unconscious bias - the association of negative attitudes to individuals based on irrelevant characteristics such as race or gender - has been observed among healthcare professionals
- Little to no studies look at the role of implicit bias in the identification and management of sepsis
- Implicit bias among providers has shown to diminish relationships as well as trust among providers

## Facts and Stats: *Sepsis Disparity in Post Acute*

- 25% of patients diagnosed with sepsis are transferred to post acute facilities
- Variability in care in post acute skilled nursing homes
- Black patients are more likely to be discharged home compared to White patients discharged to skilled nursing facility
- More research needed on outcomes post-discharge and readmissions among African American patients
- Insurance plays a role in management of sepsis for outcomes

■ Healthcentric Advisors ■ Qlarant  
■ Kentucky Hospital Association  
■ Q3 Health Innovation Partners  
■ Superior Health Quality Alliance

HQIC  
Hospital Quality Improvement Contractors  
CENTERS FOR MEDICARE & MEDICAID SERVICES

# Next Steps:

## Recommendations for Best Practice on Implicit Bias

- **Stereotype replacement:** Recognizing that a response is based on stereotype and consciously adjusting the response
- **Counter-stereotypic imaging:** Imagining the individual as the opposite of the stereotype
- **Individuation:** Seeing the person as an individual rather than a stereotype (e.g., learning about their personal history and the context that brought them to the doctor's office or health center)
- **Perspective taking:** "Putting yourself in the other person's shoes"
- **Increasing opportunities for contact with individuals from different groups:** Expanding one's network of friends and colleagues or attending events where people of other racial and ethnic groups, gender identities, sexual orientation and other groups may be present
- **Partnership building:** Reframing the interaction with the patient as one between collaborating equals, rather than between a high-status and a low-status person

# 2016: The Oklahoma Sepsis Learning Collaborative

- OHA received a grant from Telligen Community Initiatives for the Collaborative
- Objectives of the Collaborative included utilization of a sepsis screening tool for inpatients age 18 and older, on participating units.
- Outcomes:
  - 228,735 patients screened on 20 participating units (13 ICU, 20 ED, 7 non-ICU, non-ED units: med surg, CCU, hospital-wide)
  - Decrease in the sepsis mortality rate by 15% for participating OK hospitals as compared to OK State Department of Health public discharge data;
  - ***Data analysis interpreted into saving 280 lives!***

The next call....

**Sepsis Screening Tool for Adult Patients > Age 18 years**

Part I - SIRS criteria (two or more of the following):

- Temp >100.9°F or <96.8°F
- Pulse >90
- RR >20 or PaCO2 <32mmHg
- WBC >12k, <4K or >10% immature bands
- Acute change in LOC from baseline
- Glucose >120mg/dL in non-diabetic

Part II - Infection (suspected or confirmed):

- Pneumonia
- UTI
- Acute abdominal
- Meningitis
- Cellulitis/Skin
- Wound
- Invasive lines
- Decubitus ulcer
- Colitis
- Pancreatitis
- Bone/Joint
- Other

Part III - ACUTE (NEW) Organ Dysfunction:

- Increasing O<sub>2</sub> requirements to keep SpO<sub>2</sub> >90%
- CR ↑ 0.5 from baseline
- Platelets <100,000/μL
- Bilirubin >4mg/dL
- Urine output <0.5/kg/hr (non-renal failure patient)
- SBP <90 (or 40mmHg less than baseline) or MAP <65mmHg
- pH <7.30
- Liver enzymes >2x normal
- Ileus
- Lactic Acid >2mmol/L (>4mmol/L critical value)

Part IV - Severe/Septic Shock:

- Contact Physician/PA/APRN-CNP (automatic lab draw orders)

Admit date/time: \_\_\_\_\_ Direct Admit / ED Admit (circle one)

VS: \_\_\_\_\_ Chief Complaint: \_\_\_\_\_

Ed Findings: \_\_\_\_\_

Part I - SIRS Criteria (two or more of the following):

Temp >100.9°F or <96.8°F       WBC >12k, <4K or >10% immature bands

Pulse >90       Acute change in LOC from baseline

RR >20 or PaCO2 <32mmHg       Glucose >120mg/dL in non-diabetic

Patient admitted with Sepsis  
**Yes / No (circle one)**

If Yes, stop, no need to screen

If two or more are checked in Part I, please complete Part II.

Part II - Infection (suspected or confirmed):

Goals in first hour of positive screening:

- Blood cultures prior to antibiotics
- Serum Lactate
- Admin of broad-spectrum antibiotic
- Fluid bolus

If Part I and Part II are positive, order FSBS, CBC and Lactic Acid.

Physician Signature \_\_\_\_\_ Date/Time \_\_\_\_\_

If one or more are checked on Part II, please complete Part III.

Part III - Acute (new) Organ Dysfunction:

Increasing O<sub>2</sub> requirements to keep SpO<sub>2</sub> >90%       pH <7.30

CR ↑ 0.5 from baseline       Liver enzymes >2x normal

Platelets <100,000/μL       Ileus

Bilirubin >4mg/dL       Lactic Acid >2mmol/L (>4mmol/L critical value)

Urine output <0.5/kg/hr (non-renal failure patient)

SBP <90 (or 40mmHg less than baseline) or MAP <65mmHg

If one or more are checked on Part III, patient has screened positive for severe sepsis. \_\_\_\_\_ Initials

Part IV - Severe/Septic Shock:

Contact Physician/PA/APRN-CNP (automatic lab draw orders)

Please identify screening conclusion:

Sepsis = Infection (or suspected) + two SIRS criteria (watch for organ dysfunction)

Severe Sepsis = Sepsis + one or more acute organ dysfunction (Sepsis Protocol)

Septic Shock = Severe Sepsis + persistent hypotension despite 30mL/kg fluid bolus and/or Lactic acid >4mmol/dL (Sepsis Protocol)

# The ICU. . . .

- Fluids
- CT Scan
- X-Rays
- EEG
- Spinal Tap
- Antibiotics
- Vancomycin
- Levophed
- Lab tests sent to Mayo Clinic

24 hours  
later.....  
Where's  
Mom?

3 days in ICU

Source of infection  
not found

Discharged to  
home on day 4

# Sepsis Screening Tool

Page 1 of 2

Patient Label Here:

## WCH Evaluation for Sepsis Screening Tool

### Instructions:

Use this tool to screen every patient for sepsis in the emergency department, on the medical surgical floors, or in the ICU (one time per shift)

#### 1. Is the patient's history suggestive of a new infection? (*may check box if infection is suspected*)

- Pneumonia, empyema  Bone/joint infection  Implantable device infection
- Urinary tract infection  Wound infection  Other \_\_\_\_\_
- Acute abdominal inf.  Blood stream catheter infection
- Meningitis  Endocarditis
- Skin/soft tissue infection  Yes  No

#### 2. Are any two of the following signs and symptoms of infection both present and new to the patient?

- Hyperthermia (>101.0°)  Tachypnea > 20 bpm
- Hypothermia (<96.8°)  Leukocytosis (WBC > 12)
- Altered Mental Status  Leukopenia (WBC < 4)
- Tachycardia > 90 bpm
- Hyperglycemia (plasma glucose > 140mg/dl) or 7.7 mmol/L in the absence of Diabetes  Yes  No

**\*IF ANSWER IS NO TO ANY QUESTION ABOVE THEN ASSESSMENT MAY BE STOPPED; IF ANSWERS ARE YES TO BOTH QUESTIONS SUSPICION OF SEPSIS IS PRESENT, PLEASE PERFORM DUTIES BELOW AND MOVE TO QUESTION 3\***

- ✓ Obtain: Lactic Acid, Blood Cultures (PRIOR to antibiotic administration), CBC w/ Diff, Basic Chemistry labs, Bilirubin
- ✓ Start: Broad Spectrum IV Antibiotics (as ordered by physician)
- ✓ At the physician's discretion obtain: UA, chest X-Ray, amylase, lipase, ABG, CRP, CT Scan

#### 3. Are any of the following organ dysfunction criteria present at a site remote from the site of the infection that is NOT considered to be chronic conditions? Note: in the case of bilateral pulmonary infiltrates the remote site stipulation is waived

- SBP <90 mmHg or Map <65 mmHg or a decrease of 40 below normal for that patient
- Acute Respiratory Failure (new need for invasive or non-invasive mechanical ventilation VENT or BiPAP)
- Creatinine > 2.0 mg/dl or urine output <0.5ml/kg/hour for 2 hours
- Bilirubin > 2 mg/dl
- Platelet count < 100,000
- Lactate >2 mmol/L
- Coagulopathy (INR>1.5 or PTT > 60 secs)
- Acute lung injury with PaO2/Fio2 <250 in the absence of pneumonia as infection source  Yes  No

**\*IF SUSPICION OF SEPSIS IS PRESENT AND ORGAN DYSFUNCTION (NOT CONSIDERED TO BE DUE TO A CHRONIC CONDITION OR MEDICATION) IS PRESENT, THE PATIENT MEETS CRITERIA FOR SUSPECTED SEVERE SEPSIS AND SHOULD BE ENTERED INTO THE SEVERE SEPSIS PROTOCOL. IF DOCUMENTATION OR CONCERN OF SEPTIC SHOCK IS PRESENT PLEASE USE THE SEPTIC SHOCK PROTOCOL**

# Implementation Process

---

## PLAN

- Team leader: Emergency Department Manager
- Subject Matter Experts: ED Manager and ED Physician Director reviewed the tool

## DO

- Intervention: Implement sepsis screening tool for all patients in the ED
- Implementation: Infection control and ED Manager took 24 hr. call for questions and assistance for physicians and staff

## STUDY

- Tracked implementation progress
- Identified barriers and successes via the Clinical Safety Team
- Data collection: outcomes performance on departmental scorecards

## ACT

- Share the data with leadership
- Regularly evaluate effectiveness of the process

# Summation & Key Takeaways

---

- Sepsis is a life-threatening medical emergency: everyone has a role to play
- Treating sepsis is costly: major human & economic impact, especially with COVID-19
- Keep sepsis top of mind: stay vigilant to early warning signs & symptoms
- Anyone can get sepsis: even from simplest of infections (i.e. tonsils)
- Start sepsis screening now: early detection can save lives
- Implement key strategies & drivers to reduce sepsis-related harm & readmissions
  - Infection/sepsis prevention
  - Early, equitable detection & treatment
  - Patient & family engagement

# Wrap-up & Highlights of Upcoming Events

## Save the Date for Exploring Sepsis Strategies - Part 2

- [September 30, 2021 11 PT/12 MT/1 CT/2 ET](#)
